

Resolve the ticket. Verify the work.

Use evidence to prioritize, act, document, and close.

Priority matrix

P1 / Critical

Whole site stopped; no usable alternative.

P2 / High

Team blocked; no practical alternative; dispatch deadline within one hour.

P3 / Normal

One person or workstation; a usable alternative; no immediate team-wide block.

01 Inspect the effect on work

Who is affected? What is blocked? Is there an alternative? When is the deadline?

02 Match the article to the symptom

KB-101: wrong printer. KB-202: online label printer with a stalled queue. KB-303: offline or disconnected device.

03 Keep the action within its approved scope

Use the correct workstation, device, and job IDs. Never purge unrelated queues or reset a shared server to solve this ticket.

04 Verify after the latest action

Confirm the right printer, readable output, and restored work. A new action invalidates the earlier confirmation.

05 Document, then choose the status

Record evidence, action/KB, verification, and outcome/owner. Select Resolved only after confirmation; otherwise retain ownership and use the appropriate waiting status.
